# Corsa HTML Template

---

created: 10/19/2013

by: UpSolution

[themeforest.net/user/upsolution](http://themeforest.net/user/upsolution)

Thank you for your purchase! If you have any questions that you feel should have been in this document, please log in using the account used to purchase the file and email via my user page contact form here. Thanks!

For questions on basic HTML, JavaScript or CSS editing - please give your question a quick Google or visit W3Schools as theme issues get top priority. You will need some knowledge of HTML/CSS to edit this theme.

Version 1.0

## File Structure

Within the download you will find the following file structure, logically grouping common assets. When you open the folder of the Vittoria theme, you will see something like this:

```
1.  UpSolution
2.  +-- css/
3.  |   +-- motioncss.css
4.  |   +-- style.css
5.  |   +-- responsive.css
6.  |   +-- ... other styles
7.  +-- font/
8.  |   +-- ... all used fonts
9.  L-- img/
10. |   +-- ... all used images
11. +-- js/
12. |   +-- jquery-1.9.1.js
13. |   +-- plugins.js
14. |   +-- ... custom scripts
15. L-- blog-post.html
16. L-- index.html
17. L-- ... the other example html files
```

## HTML Structure

Vittoria is built on it's own responsive grid system. The syntax is simple and it's effective cross browser. You can easily customize all parts of your site or build a new ones.

### Basic HTML template

```
1.  <!DOCTYPE HTML>
2.  <html lang="en-US">
3.  <head>
4.      <meta charset="UTF-8">
5.      <title>UpSolution</title>
6.      <meta name="viewport" content="width=device-width,
initial-scale=1, maximum-scale=1">
```

```

7.      <!-- Insert here all CSS and JS links from a sample
      template -->
8.      </head>
9.      <body class="l-body headertype_sticky headerpos_top
      hometype_fullscreen">
10.     <!-- HEADER -->
11.     <div class="l-header">
12.         <div class="l-header-h">
13.             <!-- Header sections -->
14.         </div>
15.     </div>
16.     <!-- /HEADER -->
17.     <!-- MAIN -->
18.     <div class="l-main">
19.         <div class="l-main-h">
20.             <section class="l-section" id="home">
21.                 <div class="l-subsection">
22.                     <div class="l-subsection-h">
23.                         <div class="l-subsection-hh g-html i-
cf">
24.                             <!-- Page content -->
25.                             </div>
26.                         </div>
27.                     </div>
28.                 </section>
29.                 ...
30.             </div>
31.         </div>
32.     <!-- /MAIN -->
33.     <!-- FOOTER -->
34.     <div class="l-footer">
35.         <div class="l-footer-h">
36.             <!-- Footer sections -->
37.         </div>
38.     </div>
39.     <!-- /FOOTER -->
40. </body>
41. </html>

```

Key features are listed below

## 1. Easily switch between header positions

Header at the Top of the screen:

```
1. <body class="l-body headerpos_top">
```

Header at the Bottom of the screen:

```
1. <body class="l-body headerpos_bottom">
```

Header Below the screen:

```
1. <body class="l-body headerpos_outside">
```

## 2. Responsive grid

A responsive grid row structure is shown below. Each row should be wrapped in `.g-cols` container. You can use human-readable class names like `.one-quarter` or `.two-thirds`.

```
1. <div class="g-cols">
2.   <div class="one-third">
3.     <h3>One Third</h3>
4.     <p>Lorem ipsum dolor sit amet...</p>
5.   </div>
6.   <div class="one-third">
7.     <h3>One Third</h3>
8.     <p>At delectus doloremque dolores explicabo...</p>
9.   </div>
10.  <div class="one-third">
11.    <h3>One Third</h3>
12.    <p>Accusamus et hic inventore iure iusto modi...</p>
13.  </div>
14. </div>
```

## 3. Rich set of widgets

UpSolution example pages contain number of various built-in widgets:

- Icon
- IconBox
- Portfolio
- Blog
- Testimonial
- Team Members
- Contacts
- ... and many other.

## CSS Structure

CSS files used in this template:

1. `style.css` — main css file;
2. `motioncss.css` — contains the basic styles like reset, grid, typography;
3. `motioncss-widgets.css` — contains the basic styles for widgets;
4. `responsive.css` — styles for responsive layout;

5. magnific-popup.css — lightbox styles for image gallery;
6. font-awesome.css — font icons styles;
7. jquery.jgrowl.css — contains styles for popup messages.

## Color Styles

You can use one of predefined color styles for this template. Also you can build custom CSS with any colors you want.

```
1.
2.     <link rel="stylesheet" type="text/css" media="all"
      href="css/colors/color_0.css">
3.
```

## Icon Usage

Font based iconsets are used in this template, so you can change size and color of all icons by CSS.

```
1.     <i class="icon-heart"></i>
2.     <i class="icon-cog"></i>
3.     <i class="icon-beaker"></i>
4.     ...
```

To view full list of used icons please follow the link: <http://fontawesome.github.io/Font-Awesome/icons/>

## Font Usage

Fonts used in Corsa HTML template:

- PT Sans — for main text,
- Dosis — for the headers.

Check it on the [Google Fonts](#).

These fonts are embedded into HTML pages with this code:

```
1. <link rel="stylesheet" type="text/css" media="all"
    href="http://fonts.googleapis.com/css?family=Dosis:400,700">
```

## JavaScript

You can see some help info, for Javascript plugins, which are included in our template:

1. jQuery - is a Javascript library that greatly reduces the amount of code that you must write.  
For more information, please visit <http://www.jquery.com/>
2. Flexslider - Plugin's documentation can be found [here](#)
3. MagnificPopup - Plugin's documentation can be found [here](#)

## Contact Form Settings

We have implemented AJAX sending for Contact form (example is present on Services demo page). The AJAX request from Contact form is being sent to send\_contact.php file. So in order to set your Contact form up, you will have to edit the file.

There you can set your receiver email:

```
1. $your_email = 'example@example.org';
```

Also you can set some of fields as non-mandatory by commenting out any of the blocks checking if the fields are not empty. For example for making phone non-mandatory, comment out following strings:

```
1. if ($phone == '')
2. {
3.     $errors['phone'] = 'Please enter your Phone!';
4. }
```

## Sources & Credits

---

The images included in preview are for demonstration purposes only. Some photos can be purchased separately at PhotoDune and other sites. (If needed, particular links can be given at your email request).

In downloaded product folder placeholders are used instead of stock images.

Thank you so much for purchasing this theme!

Regards,  
UpSolution Team
